Profile

Second-year engineering student with a strong interest in **IoT, Embedded Systems, and Automation**. Hands-on experience in building hardware–software integrated projects using microcontrollers, sensors, and real-time control logic. Actively seeking an **IoT / Embedded Systems Internship** to apply practical skills and gain industry exposure.

Education

B.Tech Atharva College of Engineering, Mumbai

2024 – 2028

Electronics & Telecommunication

- Currently in Second Year
- Relevant Coursework: Embedded Systems, Digital Electronics, Microcontrollers, Python Programming

Projects

TerraShield – Landslide Early Warning System

AI + IoT

- Designed an AI + IoT based system to **predict and warn about potential landslides**
- Used environmental sensors (soil moisture, vibration, rainfall indicators) for real-time data collection
- Applied Threshold logic to detect abnormal patterns indicating landslide risk
- Focused on early alerts, system reliability, and real-world deployment feasibility

Smart Traffic Signal with Vehicle Detection

Computer Vision

- Developed a traffic control system using **camera-based vehicle detection**
- Implemented number plate recognition using YOLO for Indian vehicles
- Controlled traffic lights and speed breakers using Arduino-based logic

Smart Water Supply Automation System

IoT Project

- Built an automated water control system using **ESP32, servo motor, and water level sensors**
- Automatically opens and closes water valve based on tank level
- Implemented manual override and real-time system monitoring via mobile app

Skills

Programming: C++, Python, Basic JavaScript

IoT & Embedded: Raspberry Pi, Micro-controllers, PCB Designing, IoT

Tools & Platforms: GitHub, VS Code, Blynk, Basic Linux

Internship Objective

To secure an **IoT / Embedded Systems Internship** where I can contribute to real-world hardware projects, enhance system design skills, and learn from industry professionals.
